

E-Commerce Website Project Report

Project Title

Lifestyle Store – E-Commerce Website

Abstract

The E-Commerce Website project is a web-based online shopping platform developed using PHP, HTML, CSS, JavaScript, and Bootstrap. The purpose of this project is to provide users with an online platform where they can browse products, register/login, and purchase items easily.

Introduction

E-commerce websites allow customers to purchase products online without visiting physical stores. The Lifestyle Store project is designed to display products such as cameras, watches, and shirts with a responsive and user-friendly interface.

Objectives

1. To develop an online shopping website.
2. To create a responsive user interface.
3. To implement user registration and login functionality.
4. To display products with pricing details.
5. To provide a secure shopping experience.

Technologies Used

- PHP
- HTML
- CSS
- JavaScript
- Bootstrap
- MySQL

Modules of the Project

- User Registration
- User Login
- Product Display
- Shopping Cart
- Order Management
- Contact Page

Features

- Responsive Design
- User Authentication
- Product Listings
- Buy Now Option
- Easy Navigation
- Interactive UI

Advantages

- Easy online shopping
- User-friendly interface
- Fast product browsing
- Responsive design for all devices

Future Enhancements

- Online payment gateway
- Admin dashboard
- Product search and filters
- Order tracking system

Conclusion

The Lifestyle Store project successfully demonstrates the development of an e-commerce website using modern web technologies. The project provides practical knowledge of front-end and back-end web development.
